### **Prototype description**

It is the European Commission's aim for e-invoicing to become the predominant method of invoicing in Europe by 2020. The objective of this prototype project is to promote e-invoicing between SMEs and budget users both nationally and between neighboring countries. We, the participants already involved in the e-invoicing scheme, are the best promoters of e-invoicing and can help new users with our knowledge and experience. The aim of the prototype project is to encourage the exchange of e-invoices between Slovenian organizations and their cross-border partners. In order to create an EU-wide or even broader network, as well as to provide for the general acceptance of e-invoices, it is of key importance that a favourable environment be created that will facilitate new business relations between the participating parties.
