Our company is specialized in the manufacture of boiler-maker. We produce tanks and frame for industry

We wish to integrate the design; mechanical engeneering , construction drawings. Today, the design and dimensioning are realized by our customers, or sometimes by us (but we have to outsource and in these cases we encounter difficulties).

The goal of the approach is to find a company able to perform the design and sizing, with whom we could create a partnership in order to offer turnkey solutions to our customers.  
If this company is capable of manufacturing these equipments like us, this may also be a possibility.
