

Project objective

The Contractor shall provide equipment for rapidly deployable camps accommodating up to 1800 people. The camps shall consist of modules and sub-modules stored readily available for multi-modal transport including transport by military fixed wing aircrafts. Combined with elements not included in this SOW, this equipment will be used by military forces for a large spectrum of missions that may occur over a wide range of geographic environments and climatic conditions. Accordingly, the solution proposed shall provide flexibility and modularity, shall be agile yet heavy duty and capable of performing under difficult climate and terrain conditions with minimum support.
