SMART.

SLOVENIA@CERN

“ In Slovenia, you can drink tap water, since it is pristine.”

## FACTS ABOUT SLOVENIA

**Official name:** Republic of Slovenia.

**Capital:** Ljubljana.

**Political system:** parliamentary democracy.

**Surface area:** 20,273 km<sup>2</sup>.

**Population:** 2.07 million.

**Currency:** euro.

**International calling code:** +386

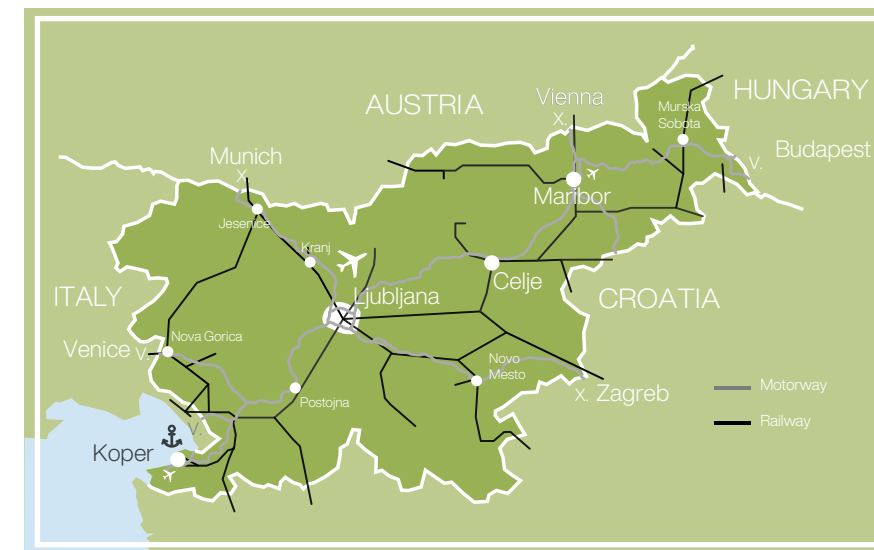

**Time zone:** GMT/UTC +1.

**Member of the EU since 1 May 2004.**

**Adopted the euro (€) as the national currency on 1 January 2007.**

**Schengen area member state since 21 December 2007.**

**Member of the OECD since July 2010.**

“Slovenia is a country of forests, which cover almost 60% of its surface. In percentage of forest cover, Slovenia comes in the third place in the European Union, after Sweden and Finland.

## Honourable CERN representatives, esteemed researchers and Slovenian business representatives,

The Republic of Slovenia's associate membership in the European Organization for Nuclear Research (CERN) undoubtedly marks an important milestone on the path towards the full membership that Slovenia hopes to obtain in 2022. Nevertheless, the associate membership in itself provides an opportunity for Slovenian science and economy to create additional value and enhance development.

This membership grants Slovenian scientists unlimited access to all CERN programmes and thereby increases the intellectual base of collaborating institutions. Associate membership also bodes well for the Slovenian economy, seeing as it allows Slovenian businesses full access to CERN contracts and, through that, entry into highly competitive markets of knowledge-based products.

Slovenian scientists established scientific cooperation with CERN many years ago, in fact even before Slovenia became an independent state. In their decades of joint projects with CERN, Slovenian scientists achieved multiple scientific breakthroughs in understanding the fundamental building blocks of nature and the relations between them. Based on the research conducted at CERN, Slovenian scientists published more than 1,300 scientific papers in high-impact international journals. These works contributed around 54,000 citations to Slovenian science, of which more than 5,000 can be attributed to the paper on the discovery of the Higgs particle. In addition to the work carried out at CERN, twenty-five bachelor's, twelve master's and twenty-three doctoral theses were completed. Another benefit is the opportunity to be involved in not only the scientific research at CERN, but also to participate in educational programmes and the construction of parts and instruments for future accelerators.

I am overjoyed that the associate membership opened up opportunities for cooperation for the Slovenian economy. For that reason, I welcome the very first Slovenian Industry Day at CERN, which I hope will result in new and stronger collaborative relationships, and provide opportunities for joint scientific and economic work related to research and development in CERN. I believe that including Slovenian businesses in CERN's work will also strengthen the relationship and cooperation between Slovenian science and economy.

The positive response of the Slovenian economy to the first Slovenian Industry Day at CERN is encouraging and it suggests that such events at CERN will become a well-established practice allowing exchanging information, strengthening cooperation and, in the future, furthering Slovenian business interests in these events.

With the Slovenian Industry Day at CERN we aim to draw attention to the importance of research and development activities and the benefits they provide to society. I am glad that the event at CERN is taking place in autumn, as, in Slovenia, this is a season with many events related to the presentation, work, successes and promotion of scientific achievements.

I wish you all successful work and I hope for many productive individual meetings between Slovenian business representatives and CERN, which will bring new business and long-term collaboration.

Dr. Jernej Pikalo  
Minister of Education, Science and Sport

“ The basic activity of the public institute is the promotion of space technologies and the manifestation of human achievements in space with the interweaving of art and high technologies.

The offer includes the development, installation and marketing of space content in the form of art exhibitions, exhibitions of items and multimedia interactive applications that we offer to the general public.

“Your business can be easily driven by innovation based on local knowledge: 41.2% students graduated with degrees in science and engineering (IMD world competitive yearbook 2018)

## Message of Director General of SPIRIT Slovenia

When it comes to building international presence of Slovenian companies, the Public Agency SPIRIT Slovenia spares no effort to open doors for those willing to take up the challenge. The Slovenian Industry Day is an exceptional opportunity to give a boost to the cooperation between Slovenian industry and CERN by helping companies and research institutions gain knowledge on how to become part of the flow of knowledge and services to and from CERN.

Knowing that Slovenia's return coefficient for both supply and service contracts is below 0.40, wish to make the most of the window of opportunity this event offers. On the one hand, there are many potential ways for Slovenian companies to collaborate with the international high-energy physics community in CERN's areas of expertise. On the other, however, to grow international sales by catching the eye of a business partner such as CERN is a big deal indeed. To make the first steps easier for companies and research institutes, at SPIRIT SLOVENIA, we have tailored support and advice for them for a successful engagement in international markets thanks to their proven experience and competence in industry, technology and R & D.

And that is not all. We believe that the notions associated with CERN such as driving technological advancement forward, computing for high-energy physics and quantum thinking set new benchmarks for the industry and go hand-in-hand with green thinking. Actually, boosting trade and investment relationships by connecting knowledge, technology and productivity reduces the footprint. In turn, it reaffirms Slovenia's key attributes: Green. Creative. Smart.

In conclusion: No task is too tall for Slovenia, an Associate Member State in the pre-stage to full Membership of CERN!

**Ajda Cuderman**  
Director General SPIRIT

“Slovenia’s talented workforce delivers creative and sustainable solutions.

(Global innovation index 2018; Global creativity index 2015)

Due to the fact of being the largest independent, voluntary, non-profit association of companies in Slovenia with a broad network of direct connections to companies and partner institutions in Slovenia and abroad, the Chamber of Commerce and Industry of Slovenia (CCIS) has taken over the role of identifying export-oriented companies with high potential of creating value added to CERN partners and promoting the advantages of cooperation with CERN amongst them.

During the last decades, Slovenian companies have found their strengths in different specialised fields and niche markets. The quality approach new ideas and solutions, created by Slovenian experts and innovators, have enabled them to play an indispensable role in global supply chains. With their long-standing experience in international business, these companies are reliable and development partners. Many of them are looking for new opportunities to prove themselves in a hi-tech global environment. The CCIS is proud to have motivated such a significant number of companies determined to explore the opportunity of presenting themselves to CERN partners and will support their export efforts in every possible way.

Boštjan Gorjup  
President of the CCIS

recently with desktop publishing software like Aldus PageMaker including versions of Lorem Ipsum.

Why do we use it?

It is a long established fact that a reader will be distracted by the readable content of a page when looking at its layout. The point of using Lorem Ipsum is that it has a more-or-less normal distribution of letters, as opposed to using 'Content here, content here', making it look like readable English. Many desktop publishing packages and web page editors now use Lorem Ipsum as their default model text, and a search for 'lorem ipsum' will uncover many web sites still in their infancy. Various versions have evolved over the years, sometimes by accident, sometimes on purpose (injected humour and the like).

Where does it come from?

Contrary to popular belief, Lorem Ipsum is not simply random text. It has roots in a piece of classical Latin literature from 45 BC, making it over 2000 years old. Richard McClintock, a Latin professor at Hampden-Sydney College in Virginia, looked up one of the more obscure Latin words, consectetur, from a Lorem Ipsum passage, and going through the cites of the word in classical literature, discovered the undoubtable source.

What is Lorem Ipsum?

Lorem Ipsum is simply dummy text of the printing and typesetting industry. Lorem Ipsum has been the industry's standard dummy text ever since the 1500s, when an unknown printer took a galley of type and scrambled it to make a type specimen book. It has survived not only five centuries, but also the leap into electronic typesetting, remaining essentially unchanged. It was popularised in the 1960s with the release of

Letraset sheets containing Lorem Ipsum passages, and more recently with desktop publishing software like Aldus PageMaker including versions of Lorem Ipsum.

Why do we use it?

It is a long established fact that a reader will be distracted by the readable content of a page when looking at its layout. The point of using Lorem Ipsum is that it has a more-or-less normal distribution of letters, as opposed to using 'Content here, content here', making it look like readable English. **Instrumentation Technologies** is a very experienced high-tech company that is able to provide cutting-edge solutions as needed.

Our flexible team is comprised of curious and innovative – yet reliable and experienced – engineers, who strive to excel in every solution they develop. Twenty years ago we started in the field of particle accelerators, regarding which we now offer diverse high-performance instruments, under the name Libera.

Utilizing the knowledge we have gained in the demanding field of particle accelerators, we are also able to offer consultation expertise in other technologically demanding fields, such as MedTech, IoT, smart cities, telecommunications, aerospace, and university research.

We have an extensive product portfolio, and also offer services in technologically demanding fields. Our solutions include hardware and embedded software design, rapid prototyping, product development, and certification assistance. Our products can be customized based on the needs of the client.

Our competencies include analogue and digital engineering, high and low level software, extensive FPGA programming, user-specific applications and solutions, significant experience in the field of precision electronics, RF measurements, and real-time digital signal processing.

We work with more than 70 laboratories all around the world, with some of the most important being: GSI (Germany), NSRRC (Taiwan), ESRF (France), DESY (Germany), SINAP (China), PAL (Korea), IHEP (China), PSI (Switzerland), ANSTO (Australia), STFC (UK), JINR (Russia), KEK (Japan), etc.

**Intra lighting's** vision is giving solutions to every challenge regarding illumination. The company does not only create architectural luminaires but more so provides holistic lighting solutions answering customer's needs. From 1989 a team of experienced professionals actively collaborates with architects and lighting designers worldwide. The thirty-year tradition, constant investments into research and development, a sense of aesthetics, and nonetheless environmental consciousness, places the company among the leaders in their field.

**Intra lighting** is a leading brand for smart lighting solutions globally, solidified by the fact that it's present on 68 global markets. It is illuminating numerous interior projects from boutique stores to bigger shopping malls, restaurants, hospitality, health, education buildings, centers of culture, industrial architecture, warehouses, as well as private premises.

It is no coincidence that it is trusted by brands Armani, Google, Facebook, Microsoft, Ferrari, and alike.

## COMPANY BUSINESS ACTIVITIES

We have been calibrating and testing with a passion for metrology for nearly three decades. We develop state-of-the-art, perfected, but easy to use metrology products and services. There are five main metrology solutions in the company's portfolio:

- Calibrations for the widest possible range of needs (covering 95 % metrology needs of our customers). Measurements

are conducted by qualified experts on location or at our accredited laboratories.

- Testing through the entire lifecycle of the sample – from raw material to prepared material, and from semi-finished product and finished product to waste. Based on the obtained test results, we offer expert counselling to help optimise the processes and sales.
- Conformity assessment of a wide range of legal measuring instruments, equipment under pressure, health and safety regulations, fire regulations, compliance of vehicles with the ATP, good practices in the pharmaceutical industry, and technical specifications of producers.
- Metrology & Quality Academy with more than 11 educational programs and custom-made program.
- Products in the field of metrology, such as **EXACTUM** and **TRAMES**.

**EXACTUM** – A new generation of measurement systems that automatically collect the measured values from measuring points equipped with sensors. In the event the environmental parameters exceed the prescribed limit values, EXACTUM sends a warning by electronic mail or text message. This allows users to respond promptly and take immediate action.

**TRAMES** – Unique systems for measuring machines that are fully adapted to the demands of our buyers. A unique concept enabling measurements in 1D, 2D, or 3D space.

**Metra** is a globally renowned manufacturer of highly reliable, secure, low-maintenance, eco-friendly and user-friendly intelligent locker systems for various types of uses and users in offices, factories, universities, hospitals and other commercial, industrial, public and other facilities.

From company's intelligent locker solutions, highlighted here are two highly suitable ones, **Metra Workplace lockers** and **Metra Workplace Delivery & Pickup lockers**.

**Smart Workplace Delivery & Pickup Lockers** is an intelligent locker solution, which makes internal individual deliveries/pickups among CERN staff in an easy, secure, discreet, error-free and traceable way (a secretary distributing incoming post to employees, employee sending sensitive, need-to-know documentation to a superior or project co-worker, etc).

It saves time and reduces operating costs, as minimum or no distribution staff is needed. Recipient gets unique code for pickup and info where to pickup (if more delivery locker locations are available). No items can get lost, forgotten or wrongly delivered/picked up by a wrong person.

**Smart Workplace Lockers** is an intelligent locker solution for activity-based and permanent smart storage lockers, either individual or group (for projects, departments, etc.). Individual's access card becomes secure locker key. PIN code or mobile app can become a secondary locker key, if there is no access card at hand. Visitors and guests can have short-term lockers with visitor access card or random PIN code, to securely store belongings during the visit or meeting.

#### What is Lorem Ipsum?

Lorem Ipsum is simply dummy text of the printing and typesetting industry. Lorem Ipsum has been the industry's standard dummy text ever since the 1500s, when an unknown printer took a galley of type and scrambled it to make a type specimen book. It has survived not only five centuries, but also the leap into electronic typesetting, remaining essentially unchanged. It was popularised in the 1960s with the release of

Letraset sheets containing Lorem Ipsum passages, and more recently with desktop publishing software like Aldus PageMaker including versions of Lorem Ipsum.

#### Why do we use it?

It is a long established fact that a reader will be distracted by the readable content of a page when looking at its layout. The point of using Lorem Ipsum is that it has a more-or-less normal distribution of letters, as opposed to using 'Content here, content here', making it look like readable English. Many desktop publishing packages and web page editors now use Lorem Ipsum as their default model text, and a search for 'lorem ipsum' will uncover many web sites still in their infancy. Various versions have evolved over the years, sometimes by accident, sometimes on purpose (injected humour and the like).

#### Where does it come from?

Contrary to popular belief, Lorem Ipsum is not simply random text. It has roots in a piece of classical Latin literature from 45 BC, making it over 2000 years old. Richard McClintock, a Latin professor at Hampden-Sydney College in Virginia,

Our main activity is development and design of different types of centrifugal pumps. We develop pumps for nuclear, Oil&Gas and general industrial application. We also manufacture custom made pumps for special cases, where it is difficult to find pumps from regular production.

Second activity is water turbines design. Our current project is design of 125 MW reversible pump turbine for Bharat Heavy Electricals Limited, India.

Our third activity is water treatment. We have a lot of experience in engineering and production of water treatment plants for clean and waste water. Under UN Oil for Food programme for Iraq, we have delivered more than 300 water treatment units for villages and smaller towns.

## ŽUST-AL

**Žust-AL d.o.o.** is a modern, family-owned company situated in Žiri, Slovenia. Founded in 1996, it has grown into a successful business in CNC technology and welding throughout Slovenia and abroad.

With years of experience, high quality work and traditional values, the company has established strong business relations by constantly adjusting to the modern market, resulting in growth from a craft activity into a tool manufacturing company, providing components for the automotive, science and other industries. Following only high quality production standards, we are constantly developing and creating long lasting growth opportunities.

Through the recent years we have established many solid partnerships with other leading companies, specializing in CNC turning, grinding, water jet cutting, laser cutting and other techniques. We can also take care of 100% dimension control of parts by independent certified measuring laboratory.

All this, makes it possible for us, to take care of your projects, from the plan, to the final product. "From mould to top-notch product" – This expression well describes the volume of our product portfolio, covering toolmaking, machine construction, automation, and the delivery of turnkey machine vision solutions that reliably inspect production line products before being shipped to clients.
